## **High-pressure Cleaning Truck**

FULONGMA GROUP CO., LTD.

2022-03-03

## INTRODUCTION

#### 1. Overview

FLM5182GQXDFBEV electric high pressure cleaning truck adopts Dongfeng EQ1180GEVJ1 chassis and has two independent high and low pressure cleaning systems. The high-pressure cleaning system includes front-cleaning spray bars, single-point flushing nozzle, hand-held spray guns and reels and other operating devices. The low-pressure cleaning system includes front duckbill flushing nozzles, central side flushing nozzles, rear sprinklers, rear high water spray gun. In addition, the product can be equipped with operating devices such as rear upper sprayer, rear bottom sprayer, low-pressure single-point flushing nozzle, widen platform, and left and right side watering, sewer dredging device according to user needs.

#### 2. Functions

This product has two cleaning system: high pressure cleaning and low-pressure cleaning. The high-pressure cleaning system includes a front-cleaning spray bar, a hand-held spray gun, and a single-point flushing nozzle. The low-pressure cleaning system includes front duckbill flushing nozzles, central side flushing nozzles, rear water sprayer, and rear water spray gun.

The front cleaning spray bar in the high-pressure cleaning system can be used to clean stubborn stains and sticky filth on squares and roads. The hand-held high-pressure spray gun can be widely used to clean general equipment including product bodies. The single-point flushing device can be used for cleaning. Realize the yaw in the left and right directions, which is used to clean the sewer and stubborn filth. The right side guardrail cleaning device can perform high pressure cleaning on the curb, guardrail base and guardrail when the vehicle is running.

The front duckbill flushing nozzles, the middle side flushing nozzles and the rear sprinkler in the low-pressure cleaning system can be used for flushing and watering operations in roads, squares and other places. Water cannons are suitable for remote flushing and watering.

#### 3. Applications

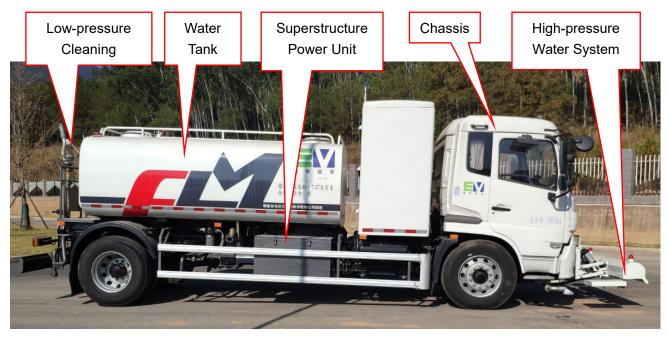

This truck can be widely used in the cleaning operations of urban roads, highways, squares and ports and docks, as well as the watering operations of green belt plants. Optional rear top spray and rear bottom spray systems are available for dust suppression. The optional left and right side watering device can water the greening on the left and right sides of the road. Optional self-priming device can pump water from rivers and lakes, saving tap water resources. Optional automatic water cannon device to achieve remote flushing, sprinkling and watering. The vehicle has various functions, and one vehicle can be used for multiple purposes.

#### 4. Structure

#### 4.1 Chassis

**Chassis:** It is modified with EQ1180GEVJ1 chassis produced by Dongfeng which has strong power and strong bearing capacity.

**Motor:** Electric motor TZ370XS-LKM1103 from Suzhou Transmission is used, rated power 80kW, rated speed 1270r/min.

#### 4.2 Water Tank

The total volume of the water tank is 9.81m<sup>3</sup>, and the effective volume is 7.37m<sup>3</sup>. The volume of the water tank is large and the continuous working time is long. The water tank adopts the finite element analysis method to optimize the design, and has passed the strict reliability test. The inside of the water tank adopts the professional anti-corrosion coating of epoxy coal tar paint to ensure the anti-corrosion effect.

#### 4.3 Power Engine & Transmission

The power system of the truck adopts the superstructure motor to drive the high-pressure water pump, and the chassis motor to drive the self-priming two-stage centrifugal pump. The two sets of waterway systems can be used alone or in combination to clean road surfaces with different pollution levels. Optional: The motor drives the low-pressure water pump independently, ensuring that the speed of the low-pressure water pump will not be affected

by the running speed of the chassis.

4、高压水路系统

**High-pressure water pump:** The plunger pump of famous manufacturer is used, which has high efficiency and good reliability. The rated working pressure of the pump is 10MPa, and the rated flow is 142L/min.

**Front cleaning water spray bar:** it has a simple and elegant appearance, the cleaning width is not less than 3m, and it can be rotated left and right. If there is an obstacle ahead, the left and right spray bar can be retracted inwards, and then automatically return to the normal position when passing it.

**Single-point flushing device:** It can realize left and right rotation, and can be used to clean stubborn filth on roads.

**High-pressure cleaning reel:** When in use, it can be directly connected with a quick connector, and the reel comes with a 20m water hose which can be used for body cleaning, road cleaning and other operations.

#### 4.5 Low-pressure Cleaning System

**Low-pressure water pump:** The self-priming two-stage centrifugal pump of Hangzhou WLOONG is adopted, which has high transmission efficiency and good reliability. The rated working speed of the pump is 1380r/min, the rated flow is 50 m<sup>3</sup>/h, and the head is 110m.

**Front duckbill flushing nozzle:** It's controlled by pneumatics, suitable for flushing road surfaces and curbs, and the flushing direction can be adjusted within the range of 360° left and right and 360° up and down.

**Central side flushing nozzle:** There are conical nozzles on the left and right in the middle, which can perform two-way flushing, all controlled by pneumatics. The nozzle can be adjusted 360° left and right, 360° up and down, and the flushing width is not less than 24 meters.

**Rear sprinkler:** The rear sprinkler is opened and closed by pneumatic control. When two nozzles are turned on at the same time, the spraying width shall not be less than 16 meters. **Rear water spray gun:** The water spray gun is an aluminum long-range water gun. It is

installed at the rear of the vehicle, with flexible operation and a wide range of working angles. It can be used to spray objects of various heights and remove some difficult-to-clean stains. The water spray gun can be rotated 360°, and the gun body can be tilted up and down. Rotate the adjustment sleeve at the front of the gun body forward and reverse to adjust the spray shape (column or mist) of the water gun. The water spray gun is controlled by a manual ball valve, with a range of not less than 50 meters, and also has an auxiliary fire-fighting function.

#### 4.6 Control

The vehicle adopts a control mode that combines electrical control and manual control.

The front cleaning spray bar, the guardrail cleaning device, the single-point flushing device in the high-pressure waterway, and the front duckbill nozzles, the central side flushing nozzles, and the rear sprinklers in the low-pressure waterway system are all controlled by the control box in the cab.

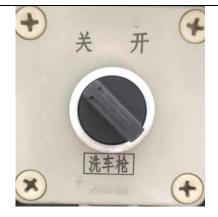

The hand-held spray gun is turned on and off by electric control, and its control box is located on the right rear side of the vehicle.

#### 5. Main Specifications

Items	Specifications
Chassis Model	EQ1180GEVJ1
Chassis Manufacturer	Dongfeng Commercial Vehicle Co., Ltd.
Driving Motor Model	TZ370XS-LKM1103
Driving Motor Type & Cooling	Permanent magnet expehreneus meter water seeling
Method	Permanent magnet synchronous motor, water cooling
Driving Motor Manufacturer	Green Transmission
Driving Motor Rated	
Power/Rotation Speed/Torque	80/1270/600
(kW/r/min/N.m)	
Driving Motor Peak	
Power/Rotation Speed/Torque	160/4500/1100
(kW/r/min/N.m)	
Battery Type	Lithium Iron Phosphate Battery
Battery Manufacturer	CATL
Battery System Density	140.7
(W·h/kg)	140.7
Battery Capacity (Kwh)	314.14
EKG (Wh/km·kg)	None
Range (km)	365
Charging Method	Fast Charging (120KW Charging Pile)
Charging Time (h)	3

#### 6. Advantages

No.	Advantages	Descriptions
		The model adopts a modular design, and can be equipped with
1	Outstanding	various devices such as water suction, left and right side watering,
	Performance	rear and upper sprayer, and lower sprayer to achieve multiple uses in
		one truck, and has a high cost performance.
	Good Quality	The tank body is made of Q235B material, and stainless-steel tank
2		body (SUS304) is also optional. The interior adopts a wave-proof
2		board buffer structure, and the bottom frame adopts a frame
		structure, which ensures the overall structural strength and rigidity.
	Safe &	This product pays attention to the safety of use. The special design of
3		protective devices and warning lights can effectively prevent various
	Reliable	safety problems during operation.

FULONGMA GRUOP Co., Ltd.

Email: info@fulongmagroup.com Tel: 592-8267302

4	User-friendly Experience	The driver can complete various operations in the cab, and can switch
		the working state of the product according to the road conditions. The
		water tank is equipped with a low water level alarm system, which can
		realize the automatic alarm protection function and prevent the water
		pump from being damaged due to lack of water.
	Easy Maintenance	The water pump, pipeline and water valve are all equipped with the
5		function of draining water to prevent the product from being damaged
		by freezing and cracking in a low temperature environment.

#### 7. Working Devices

No.	Items	Descriptions
1	Front Duckbill Nozzle	
	Functions	It is used for flushing of roads, squares and other places.
	Structure & Characteristics	Controlled by a pneumatic system, it is suitable for flushing road surfaces and curbs, and the flushing direction of the nozzle can be adjusted.
	Central Side Flushing Nozzle	
2	Functions	It is used for flushing of roads, squares and other places.
	Structure & Characteristics	Flushing width: ≥24m There is a nozzle on the left and right for two-way flushing, both controlled by a pneumatic system. By adjusting the angle of the two connecting flanges, the nozzle angle can be adjusted arbitrarily.

#### FULONGMA GRUOP Co., Ltd.

3	Rear Sprinkler		
	Functions	It is used for flushing of roads, squares and other places.	
	Structure &	Sprinkling width ≥ 16m	
	Characteristics	Controlled by a pneumatic system.	
4	Rear Spray Water Gun		
	Functions	For remote flushing and auxiliary firefighting operations, it can be rotated in all directions.	
	Structure & Characteristics	Range≥50m Controlled by a manual ball valve, the water gun can rotate 360° left and right, and can be tilted up and down. Rotate the adjustment sleeve at the front of the gun body forward and reverse to adjust the spray shape (column or mist) of the water flow.	

#### FULONGMA GRUOP Co., Ltd.

	Front Spray Bar	
5	Functions	It can be used to clean stubborn stains and sticky objects on squares and pavements.
	Structure & Characteristics	Flushing width ≥ 3m Left and right yaw angle: ±15° The cylinder controls the water circuit breaking, up and down lifting, left and right rotation and side spray bar deployment.
	Right Guardrail Cleaning	
6	Functions	When the vehicle is driving, high-pressure cleaning can be performed on the curb, guardrail base, and road guardrail.
	Structure & Characteristics	The water circuit is controlled by the cylinder to break, and the angle can be adjusted to realize the yaw in the up, down, left and right directions.
7	Single-point Flushing Nozzle	
	Functions	The fixed-point cleaning device can realize the rotation in the up, down, left and right directions, which is convenient for clearing the road surface stains at a fixed point.

Environmental Sanitation Solutions

	Structure & Characteristics	The water circuit is controlled by the cylinder to break, and the push-pull flexible shaft controls the rotation in the left and right directions.
8	Hand-held Water Spray Gun	
	Functions	For truck cleaning, road cleaning and other operations.
	Structure & Characteristics	Cleaning pressure: 8MPa The reel comes with a 10m water hose.

#### 8. Optional Selected

No.	Items	Descriptions
1	Suction Device	
	Functions	It can be used in sites lacking pressurized tap water to add water through unpressurized water sources such as rivers, lakes, and reservoirs.
	Structure & Characteristics	The interface is located in the middle of the right side of the vehicle, equipped with two 4-meter-long self-priming hoses, with a self-priming height of 6.5 meters.

#### FULONGMA GRUOP Co., Ltd.

2	Upper Sprayer		
	Functions	Dust reduction, heatstroke prevention and cooling operations.	
	Structure & Characteristics	Located at the top and rear end of the water tank, it is equipped with a stainless steel spray nozzle, which has a good effect of dust reduction and cooling.	
3	Bottom Sprayer		
	Functions	Dust reduction, heatstroke prevention and cooling operations.	
	Structure & Characteristics	Located on the rear bumper, equipped with stainless steel spray nozzles, with large spray flow and good dust reduction and cooling effect.	
4	Left & Right Watering Nozzle	Water the green belt	
	Functions	Water the green belt.	

FULONGMA GRUOP Co., Ltd.

	Structure &	There are 8 lotus spray heads on the left and right, located on both
	Characteristics	sides of the top of the water tank, and the angle of the spray heads
	onaracteristics	can be adjusted.
5	Water Spray Gun	
	Functions	Can be used for truck wash, cleaning.
	Structure &	Equipped with a 10-meter hose reel, located on the rear work
	Characteristics	platform.
6	Widen Platform	
	Functions	It can be operated by two people on the rear platform.
	Structure &	It is located at the rear of the tank, and the area of the rear platform
	Characteristics	is enlarged.
	1	1

#### FULONGMA GRUOP Co., Ltd.

7	Rear Indicator	
	Functions	Different types of arrow lights are optional.
	Structure & Characteristics	Customers can freely choose according to their needs.
8	Left Automatic Water Cannon	
	Functions	For remote flushing and auxiliary firefighting operations, it can be rotated in all directions.
	Structure & Characteristics	Realize in-cab control, easy to operate.
9	Right Automatic Water Cannon	
	Functions	For remote flushing and auxiliary firefighting operations, it can be rotated in all directions.
	Structure & Characteristics	Realize in-cab control, easy to operate.
