# INTRODUCTION

## 1. Product Overview

FLM5070TCADG6 wet waste collection truck adopts DONGFENG EQ1075SJ3CDF chassis, which is specially used for collecting, cleaning, and transporting kitchen garbage. The whole truck has the advantages of sealed transportation, large loading capacity, and high loading efficiency, which can fully meet the needs of the existing wet waste collection and transportation. In addition, the product can be equipped with a sewage tank heating device, screw discharge device, lifting mechanism weighing system, and automatic ejector unloading mode according to user needs.

### 2. Functions

The truck uses the lifting mechanism on the right side of the truck to carry out the trash can loading operation and is compatible with 120L and 240L standard trash cans. The inside of the tank body has a built-in ejector, which can be used for garbage unloading operations. The tailgate has a curved structure, which increases the loading capacity and improves the overall strength of the tailgate. Equipped with a truck-mounted hydraulic drive cleaning device, which can clean the truck and the surrounding environment. At the same time, it is equipped with night work lights and tailgate safety braces to improve the convenience and safety during night operation and maintenance.

## 3. Applications

This truck is suitable for the collection and transfer of wet waste in central urban areas, residential communities, hotels, canteens, and hospitals. Various options: sewage tank heating device to avoid freezing of the sewage tank and the bottom of the garbage tank during winter operations; screw unloading to improve the diversification of unloading methods to meet the personalized needs of different users; weighing system to meet the needs of the market supervision of the wet waste collection, transportation and disposal process; the automatic operation mode of feeding, pushing and unloading can improve the intelligence and level of the truck and reduce the labor intensity.

#### 4.1 Chassis

The chassis is modified from the EQ1075SJ3CDF chassis of DONGFENG, which has strong power and strong carrying capacity.

The engine adopts the Q28-130E60 diesel engine of QUANCHAI, with a rated power of 96kW, a rated speed of 2800r/min, and emission standard meets the China VI Standard.

## 4.2 Tank Body

The tank body has a total volume of 6m³ and an effective volume of 4.5m³. The panel of the tank is made of all stainless-steel materials to ensure that it will not be rusted throughout the year. The truck adopts an integral frame structure, and the large curved side arc body has strong resistance to deformation, long service life, and strong loading capacity. The left side of the tank is equipped with a tire frame to prevent the truck from being unable to drive due to emergencies. The right front of the tank is equipped with night work lights, which is convenient for night work and extends the working time range. The liquid level observation window on the right side of the tank facilitates the observation of the garbage loading inside and controls the fullness of the garbage tank.

#### 4.3 Bin Lifter

The bin lifter is arranged on the right side of the tank, which can lift standard trash bins of 120 and 240 liters. The lifting mechanism and the upper cover form a linkage mechanism through a connecting rod and a swing arm. The tilting angle of the trash can and the height of the tooth plate from the ground can be adjusted by the angle adjustment mechanism and the adjustable connecting rod located at the upper end of the lifting rail. It is also equipped with a loading buffer, the turning time of the dustbin can be adjusted, making loading stable, and the garbage splashing is avoided. The use of a lifting mechanism anti-drip device can effectively avoid the problem of sewage dripping during the lifting process, reduce secondary pollution, and be environmentally safe.

## 4.4 Ejector

The ejector adopts an overall inclined design, which can increase the effective volume of the garbage tank. Special thickened sealing strips are used to improve the service life. In

The Provider of Comprehensive Environmental Sanitation Solutions Email: info@fulongmagroup.com

Tel: 592-8267302

addition, the ejector can be pushed out of the tank, which is convenient for cleaning the garbage behind the ejector.

## 4.5 Tailgate

The convexly curved tailgate has a strong anti-deformation ability, long service life, and strong loading capacity. The tailgate cylinder seat is vertically arranged, which is convenient for installation and maintenance, and the sequence valve is adopted to realize the opening and closing sequence of the tailgate and the latch, which is reliable in action and lower in cost. The tailgate adopts a special rubber strip and rubber strip groove to extend the service life and improve the sealing performance of the tailgate. An anti-drip device is installed on the tailgate to collect the leaking swill, with a simple and safe structure. When the tailgate is opened for maintenance, the safety brace can be propped up to prevent the tailgate from accidentally falling down, which can improve safety.

## 4.6 Cleaning System

Equipped with a hydraulic cleaning device, it can clean the truck and the surrounding environment, with a compact structure and good maintainability. At the same time, it is equipped with sewage collection, discharge, and flushing devices, which can initially realize solid-liquid separation, and collect and discharge excess sewage. An external fire hydrant pipe can also be used to flush the sewage tank, which is environmentally safe and improves the loading capacity and maintainability.

- 4.7 Optional rear-view camera with waterproof night vision function.
- 4.8 Optional weighing system with functions of weighing, printing, uploading, displaying, positioning, video monitoring, and trash can reading and identification functions. The system is mainly composed of four parts, namely intelligent weighing equipment, receiving and displaying instrument, intelligent terminal, and other vehicle accessories.
- 4.9 Optional sewage tank heating device. It uses an independent fuel oil liquid heater to heat the circulating coolant in the heating pipe in the sewage tank through combustion heat exchange. It has the advantages of low fuel consumption, high thermal efficiency, and extremely low exhaust gas emissions, and can avoid freezing of the sewage tank and the

The Provider of Comprehensive Environmental Sanitation Solutions Email: info@fulongmagroup.com Tel: 592-8267302

bottom of the tank.

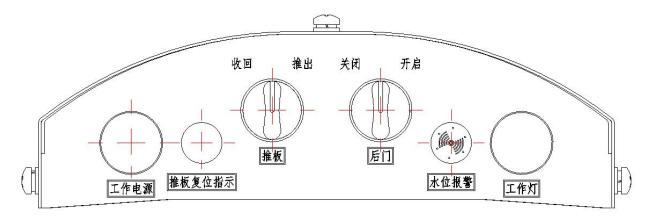

4.10 Optional garbage loading reminder and alarm device. When the garbage load in the garbage bin has reached the set value, the high-level sensor will send out a signal to activate the alarm device.

- 4.11 Optional screw unloading device, when the tailgate is closed, the garbage can be discharged from the discharge port through the screw conveyor, which is environmentally friendly and safe.
- 4.12 Optional automatic modes of lifting and ejector unloading can be installed to improve the intelligence and humanization level of the truck and reduce labor intensity.
- 4.13 Optional aluminum alloy side guard, reducing the weight of the truck and has a beautiful appearance.
- 4.14 Optional automatic cleaning and disinfection device for trash cans. When the lifting mechanism lifts the trash can into place and dumps the garbage inside, the trash truck bucket can be automatically cleaned and disinfected.

#### 4.15 Control

The operation mode adopts a combination of electric and manual mode.

The center of the instrument panel is equipped with a discharging operation box, which can operate the ejector to push out and retract and the tailgate to open and close.

The right front part of the tank is equipped with an operating handle for the lifting mechanism, and there is also a control box beside it, which can operate the ejector and the tailgate. It is also equipped with an ejector reset indicator, a washing machine switch, and an emergency

## 6. Advantages

No.	Advantages	Descriptions
	Prior	The product adopts a connecting rod-type lifting mechanism, which
1		has smooth movement, high work efficiency, large tank volume and
	Performance	high loading capacity.
	Good Quality	The tank panel is made of stainless-steel plate to ensure that it is not
2		rusty and has a long service life. The frame structure can ensure the
		overall strength and beautiful appearance.
3	Reliable	It is designed with emergency stop switch, hydraulic lock, solenoid

The Provider of Comprehensive Environmental Sanitation Solutions Email: info@fulongmagroup.com Tel: 592-8267302

		valve, proximity switch, and safety strut to ensure safe operation.
		Equipped with side guard and rear guard to ensure driving safety.
		Unloading operations can be carried out in the cab, which is very
4	Friendly	convenient. The lifting mechanism is operated by the external handle.
4	Operation	There is an external control box for the ejector and tailgate, which is
		convenient and efficient.
		The top of the tank is designed with a manhole, which is convenient
	Гору	for the maintenance and cleaning of the inside of the tank. It is
5	Easy Maintenance	equipped with a cleaning system as standard, which can clean the
		truck body and garbage tank. The sewage tank is also equipped with
		a maintenance port, which is convenient for daily cleaning.

# 7. Working Devices

No.	Items	Descriptions		
	Tank			
1	Functions	Storage wet waste and clean water.		
		Volume: 6m³		
	Structure &	Effective volume 4.5m³		
	Structure &	Sewage tank volume: 0.25m³		
	Characteristics	The panel is made of stainless steel with built-in sewage tank, clean		
		water tank, tool box and control box.

Environmental Sanitation Solutions Tel: 592-8267302

	Ejector	
2	Functions	Used for garbage compression and unloading.
		The ejector adopts an integral inclined plate design to increase the
	Structure &	effective volume of the garbage tank. Special thickened sealing
	Characteristics	strips are used to increase the service life of the strips, and the
	Characteristics	ejector can be pushed out of the tank body, which is convenient for
		cleaning the garbage at the rear of the ejector.
3	Tailgate	FULON
	Functions	Realize the sealed transportation of garbage.
	Structure & Characteristics	The convex curved tailgate has strong anti-deformation ability, long service life and strong loading capacity. The sequence valve is used to control the opening and closing sequence of the tailgate and the latch, making the action more reliable. Equipped with an anti-drip device on the tailgate to collect the leaked sewage.

5	Screw Unloading					
	Functions	There is no need to open the tailgate to realize unloading in a sealed state.				
	Structure &	When the tailgate is closed, the screw conveyor is driven by the				
		hydraulic motor to discharge the garbage from the discharge port,				
	Characteristics	which is environmentally friendly and safe.				
6	Automatic Lifting & Ejecting	●				
	Functions	Realize the circulation function of lifting mechanism and ejector.				
	Structure &	Through the sensor and related programs, realize one-key loading				
	Characteristics	and ejector unloading.				
7	Aluminum Side Guard					
	Functions	To protect the side of the truck.				
	Structure &	The side protection guard is made of aluminum alloy, which reduces				
	Characteristics	the weight of the whole truck and has a beautiful appearance.
